PixVibe for AI agents

PixVibe is a private image toolkit for you and your AI agents. Every free tool can be driven with one link: open it with an image URL and settings, wait for the result, then download it. The free tools run inside the browser, so the image is processed on the device that opens the page.

Quick start

1. Open a tool link with your image and settings: `https://pixvibe.ai/tools/remove-background?img=https://pixvibe.ai/agents/sample-candle.jpg&bg=white&agent=claude`
2. Or open the tool with settings only, wait for [data-pv-state="idle"], then set a local file on the file input #pv-file-input. The settings still apply.
3. Wait until the tool root [data-pv-state] becomes done (or error). The first run downloads the AI model and can take a while.
4. Click a download button [data-pv-download]. The file is named <original name>-<suffix>.<ext>.
5. Add agent=<your name> to the link. It turns off sign-up pop-ups and lets us count agent use. It gives no extra access.

Parameters for every tool

`img`	`https://…` Public https image URL. The page loads it and starts right away. Up to 25 MB when it goes through our proxy.
`agent`	`claude | chatgpt | …` Your agent name, e.g. claude. No pop-ups, and we can count agent use.

Remove background `/tools/remove-background`

`quality`	`standard | high | ultra` Cutout model. standard works everywhere. high and ultra need a GPU (WebGPU) and fail in most headless browsers and on iPhone / iPad.

IMAGE TOOL

HEIC to PNG Converter

Convert HEIC to PNG free, right in your browser — your iPhone photos are never uploaded. HEIC is the photo format iPhones use by default, and many Windows apps, websites and editors still can't open it. Turn your HEIC photos into PNG files that open everywhere, convert up to 20 at once, and download them instantly.
